Deven Shah

devens@stanford.edu – (650) 946-8069

Education

Stanford University Triple Major in Computer Science, Chemistry, Biology. Double Minor in Math, Physics.

- Expected Graduation: June 2027.
- GPA: 3.901
- TA: CS 106M, NBIO 201.
- Coursework: Graduate-Level AI (CS 221, CS 229, CS 246), Systems, Theory. Linear Algebra, Statistics, Real Analysis, Vector Calculus, Differential Equations. Mechanics, E&M, Special Relativity, Quantum Mechanics, Statistical Mechanics, Thermodynamics, Biophysics. Physical Chemistry, Inorganic Chemistry, Organic Chemistry, Biochemistry. Molecular Biology, Genetics, Cell Biology, Evolution, Physiology, Neuroscience.
- Clubs and Activities: Stanford Chemistry Society (Co-Chair), CHEM-H UEP (Entrepreneur), Effective Altruism (Arete Fellow), Synapse, The Stanford Review, The Girard Society, Stanford AI Alignment.

Job Experience

(October 2026 –) Research @Google Deepmind

- Co-Scientist team: LoRA, mid-corpus training, preference tooling Gemini for science.

(July – September 2026) Internship: AI/Robotics Engineer @Xaira Therapeutics

- Project: Build end-to-end robotics stacks for laboratory environments, R2S2R with digital twins.
- Single-handedly constructed SFT, RL post-training environments for VLA models such as COSMOS3-Super and $\pi_{0.5}$. Familiar with IsaacSim, MoveIt2, Gazebo, ROS.

Engineering Projects

(December 2025 – Current) A Vision Transformer for ATTR Bone Scintigraphy Scans, Stanford LS-AI

- Built radiomics LogReg with hand-engineered features and CNN with MLP head from scratch. Engineered three-class linear head on frozen DINOv2 ViT-S/14 vision transformer.
- Trained models on 1000 synthetic whole-body bone scintigraphy scans, compared error, accuracy, Macro-F1, AUROC, log loss. Set up CNN Grad-CAM, vision transformer patch attribution heatmaps and established new biomarkers of disease.
- Presented at Stanford LS-AI.

(April 2025 – January 2026) LYTAC Degradation for Cardiac Amyloidosis, Stanford Sarafan CHEM-H

- Elimination of transthyretin amyloid fibrils using first-in-class lysosome-targeting chimeras (LYTAC).
- Co-founders: Logan Campbell, Christine Xie; Scientific Advisors: Prof. Nathaniel Gray, Dr. Mark Smith, Dr. Andrew Hinman.
- Selected for Stanford Sarafan CHEM-H Undergraduate Entrepreneurship Program.

Bench Research Experience

(January 2025 – Current) Undergraduate Researcher @Kool Lab Stanford Chemistry

- Developing Red-Shifted Photolabile Protecting Groups for RNA Acylation Chemistry.
- Mentor: Dr. Weifeng Lin.

(March – August 2023) Undergraduate Researcher @Tan Lab Stanford Neurobiology

- Created and Analyzed Perturbations of the 3D Genome.
- Developed Single Cell Chromatin Conformation Capture Techniques for FFPE Neural Tissue.
- Mentor: Dr. Bibudha Parasar.

Achievements

Debate

- National Champion, NDCA National Finals. Topic: Lethal autonomous weapons systems.

Science

- Alternate Finalist, International Science and Engineering Fair.
- Honorable Mention, Exploravision National Writing Competition, for "A Systematic Review of CRISPR: Applications in Medicine, Agriculture, and Global Demography."

Programs and Fellowships

- Forum for Undergraduate Environmental Leadership Fellowship, Stanford Woods Institute.

Misc.

- Can do ML libraries (PyTorch), distributed compute libraries (Spark), also Java, C++, R, etc.
- Teach Kandel's *Principles of Neural Science* to an audience on Youtube.
